

JavaScript – Objects (Quick Recap)

Object

Key : Value Pair আকারে Data সংরক্ষণ করার জন্য Object ব্যবহার করা হয়।

Syntax

```
let person = {  
  name: "Imran",  
  age: 22,  
  isStudent: true  
};
```

Access Property

Dot Notation

```
person.name;  
person.age;
```

Bracket Notation

```
person["name"];  
person["age"];
```

Add Property

```
person.city = "Dhaka";
```

Update Property

```
person.age = 23;
```

Delete Property

```
delete person.city;
```

Object Method

Method = Object-এর ভিতরের Function

```
let person = {  
  name: "Imran",  
  greet() {  
    console.log("Hello");  
  }  
};  
  
person.greet();
```

Useful Methods

```
Object.keys(person);    // সব Key  
Object.values(person);  // সব Value  
Object.entries(person); // Key-Value Pair
```

মনে রাখবে

- Object = Key : Value Pair
- Property Access → `.` বা `[]`
- Add → `object.newKey = value`
- Update → `object.key = value`
- Delete → `delete object.key`
- Method = Object-এর ভিতরের Function
- `Object.keys()` → সব Key
- `Object.values()` → সব Value
- `Object.entries()` → Key-Value Pair
- Array-এর Index থাকে, Object-এর **Key** থাকে।
